Garlic Powder For Cattle Feed

Garlic powder for cattle feed has a lot of benefits. Cattle grow fast and need much nutrition. In the process of cattle growing, it is important to adding minerals, vitamins, trace elements and allicin or garlic powder. This kind of feeding can not only increase the growth rate of beef cattle, but also reduce the occurrence of various diseases.

Garlic powder for cattle feed, produced by Mintai Company, is one of cattle feed additives. Allicin is a safe feed additive. In addition, allicin does not cross-infect with other ingredients in the feed and does not remain in the animal.

1. The functions of garlic powder for cattle feed:
   ★ Improve feed digestibility and absorption;
   ★ Reduce fecal odor, improve the shed environment;
   ★ High efficient antibacterial sterilization
   ★ Not only for cattle, but also for poultry, pigs, aqua, etc.
